

Reference

This is our reference section. It serves to provide general reference information about Cleura Cloud services.

Feature and service availability

- Our **Feature Support Matrix** lists cloud features and their availability across Cleura Cloud regions.
- The **Flavors** reference explains our naming convention for pre-defined CPU/RAM/disk configurations (“flavors”) for server instances, and their availability across Cleura Cloud regions.
- Our **Service Version Matrix** lists the open source software versions running in our Cleura Cloud regions.

API reference

- The **API reference** documentation provides useful information for accessing Application Programming Interfaces (APIs), getting information, and manipulating all sorts of Cleura Cloud objects.
