

Swift API

OpenStack Swift (not to be confused with the programming language of the same name) is an object-access API similar to, but distinct from, the S3 object storage API.

In Cleura Cloud, you interact with the Swift API using either the `swift` command-line interface (CLI), or the standard `openstack` CLI.

Either way, in addition to installing and configuring the Python `openstackclient` module, you need to install the Python `swiftclient` module. Use either the package manager of your operating system, or `pip`:

Debian/Ubuntu

```
apt install  
python3-  
swiftclient
```

Mac OS X with Homebrew

Python Package

This Python
module is
unavailable

via `brew`,
Availability
but you can

install it via

The OpenStack Swift API is available in select Cleura Cloud regions. Refer to [the feature support matrix](#) for details on Swift API availability.

```
pip install  
python-  
swiftclient
```
