Reference

This is our reference section. It serves to provide general reference information about Cleura services.

Feature and service availability

- Our **Feature Support Matrix** lists cloud features and their availability across Cleura regions.

- The **Flavors** reference explains our naming convention for pre-defined CPU/RAM/disk configurations ("flavors") for server instances, and their availability across Cleura regions.

- Our **API Service Version Matrix** lists the open source software versions running in our Cleura regions.
